Mopria Powers IPP Print Solution in Windows 10 Update

*Windows 10 supports Mopria certified printers without having to
install printer-specific drivers*

San Ramon, Calif. – Dec. 18, 2018 – The Mopria® Alliance, a global non-profit membership organization providing universal standards and solutions for print and scan, today announced that Microsoft, a member of the Mopria Alliance, has implemented an IPP printing solution based on the Mopria standard, in the latest version of the Windows 10 operating system.

Mopria is a set of standards offering simple and seamless printing to millions of certified printers and multi-function printers. Beginning with Windows 10 October 2018 Update, Windows added support for Mopria certified printers. When users install a new printer and Windows Update is not available, Windows will automatically install the Mopria certified printers. This eliminates the need for users to install any additional software or drivers, allowing them to print easily, regardless of the printer's brand.

"Implementing the Mopria standard in the most recent Windows Update enables us to continue to modernize the printing process for our customers," said David Lemson, Partner Director for Program Management, Microsoft. "We are pleased to be a part of the Mopria Alliance and are looking forward to continuing our work together to find better solutions for end-users."

The Mopria solution guarantees that users will always have print capabilities as long as they are connecting to any of the 120 million deployed Mopria certified printers, including over 3,000 models from manufacturers in the Alliance. This includes users who may travel and need to connect to multiple printers in new locations, or users who don't always have access to an internet connection.

"This update to Windows 10 marks another major operating system release of Mopria print technology," said Greg Kuziej, Chairman of the Board at the Mopria Alliance. "While we were initially focused on mobile printing, the expansion to Windows 10 not only expands our coverage but also demonstrates the versatility of Mopria technology and solidifies our position as a scaled universal standard making printing easier for everyone."

The Mopria print technology supported by Windows 10 lets users easily customize color, print quality, resolution, number of copies, duplex, paper size, page range, media type, orientation, input tray selection and output bin selection.

The [Mopria Alliance](#) was founded by Canon, HP, Samsung and Xerox, and the nonprofit membership organization has since grown to 21 members, representing the worldwide print and scan business. In addition to the founding companies, the Mopria Alliance today includes Adobe, Brother, Epson, Fuji Xerox, Huawei, Konica Minolta, Kyocera, Lexmark, Microsoft, OKI Data, Pantum, Primax, Qualcomm, Ricoh, Sharp, Toshiba and YSoft.
